FACULTY INCHARGE :   ASSISTANT PROFESSOR, MR. KETAN KUMAR , PH: 7838024346

Science & Technology

ABOUT INTERNATIONAL CONFERENCE

In the dynamic landscape of our digitally driven world, the interplay between law and technology is a critical arena that demands continuous exploration. The International Conference on "Law and Technology: Issues and Solutions" is a platform designed to bring together Scholars, Legal Practitioners, Academics, Company Secretary Students and Law Students to unravel the complexities and chart the way forward in this evolving domain. Collaborating with esteemed partners, Institute of Company Secretaries of India, NAKS AND ASSOCIATES, the conference aims to provide a comprehensive platform for dialogue and exploration. The primary aim of the conference is to foster a deeper understanding of the challenges posed by technological advancements and propose viable legal solutions. With a specific focus on four sub-themes — Digital Media and Women's Rights, Digital Media and Child Rights, Digital Forensics and Law and Miscellaneous — the conference aims to explore the impact of technology on these critical areas.

CONCEPT NOTE

The rapid evolution of digital technology has profoundly transformed various aspects of society, creating both opportunities and challenges that necessitate a closer examination of the intersection between law and technology. The rise of digital media has fundamentally changed how women engage with the world, providing platforms for empowerment and activism but also exposing them to new forms of exploitation and abuse. Online gender-based violence, harassment, and privacy violations are increasingly prevalent, exacerbating the digital gender divide. This conference will explore how legal frameworks can better protect women in digital spaces, addressing issues such as cyberstalking, revenge pornography, and the misuse of personal data. Discussions will also highlight the role of digital media in advancing women's rights globally, considering both the opportunities and the risks involved.

Similarly, children's interactions with digital platforms present a complex set of challenges and opportunities. While digital media can be a powerful tool for education, social inclusion, and the promotion of child rights, it also exposes children to significant risks, including cyberbullying, online exploitation, and threats to their privacy and mental health.
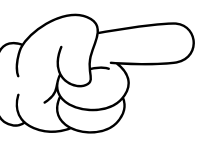

In addition to these rights-focused discussions, the conference will also address the growing importance of digital forensics in the legal system. As cybercrime becomes more sophisticated and widespread, the need for robust digital forensic capabilities has never been greater. Digital evidence is now central to many criminal investigations, yet the collection, analysis, and presentation of this evidence in court pose significant challenges. Participants will discuss the evolving legal standards, ethical considerations, and technological advancements that are shaping the field of digital forensics, with a focus on ensuring that justice is served in an increasingly complex digital environment.

By bringing together experts from law, technology, company secretary academia, and civil society, this conference aims to foster interdisciplinary dialogue, promote knowledge sharing, and develop collaborative strategies to address the legal challenges posed by technological advancements. Ultimately, the event seeks to contribute to the creation of innovative legal and technological solutions that uphold human rights, ensure justice, and support equitable development in our increasingly digital world.
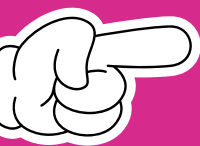

📢 ELIGIBILITY

- Students of three-year and five-year law degree courses, Research Scholars, Legal Practitioners from any University/Law School/Company Secretary & Students/College/Department, OR any Industry Experts are eligible to take participate in the competition.

- Mode of Conference: Hybrid (Offline & Online both)
